

Apex AI Labs — Senior GenAI & Knowledge Systems Engineer — Page 1

Position Overview

Apex AI Labs is seeking a Staff / Senior GenAI Engineer to lead the architecture and deployment of enterprise-grade Multi-Document Knowledge Agents, Hybrid RAG pipelines, and agentic workflows.

Mandatory Qualifications & Requirements

- 5+ years software engineering with deep focus on Python and PyTorch.
- Hands-on experience implementing LangGraph, LangChain, and autonomous Tool-Calling agent state machines.
- Extensive production experience with Vector Databases (ChromaDB, Qdrant, Milvus) and Hybrid Search (BM25 + Semantic Vector).
- Proven expertise in RAG Evaluation frameworks (measuring retrieval precision, recall, context relevance, faithfulness).
- Knowledge of production FastAPI backend design, secure authentication, and real-time streaming.

Nice-to-Have / Missing Skills to Watch For

- Knowledge Graphs (Neo4j) integrated with Vector RAG.
- Distributed Kubernetes cluster orchestration and GPU kernel optimization (Triton / TensorRT-LLM).
- Advanced GraphRAG multi-hop relational reasoning.
